This is a screenshot that shows the accessing of the actual HBB gene using the NCBI databases. These databases are available to the public and contain all kinds of useful information.

DIRECTIONS:

With the segments below, do the following:

- 1. Use the given DNA codons to transcribe the corresponding mRNA codons.
- 2. Use the mRNA codons and the codon chart to identify the amino acid sequence for that portion of the gene. (The codon chart is located on the last page)
- 3. Once you have finished the wild type transcription and translation, complete those processes for all four of the sample sequences.
- 4. Once the sample segments are completed, you then need to identify the types of mutations present in each sample, as well as identify the result of each mutation.

Wild Type HBB Gene Segment:

DNA:	TAC	CAC	GTA	GAC	TGA	GGA	CTC	CTC	TTC	AGA	CGG	CAA
mRNA:												
AA Seq:												

Sample 1: Mutation Type:												
DNA:	TAC	CAC	GTA	GAC	TGA	GGA	CAC	СТС	TTC	AGA	CGG	CAA
mRNA:												
AA Seq:												
Impact of this mutation:												
Sample 2: Mu	utation	Type: _						_				
DNA:	TAC	CAC	GTA	GAC	TGA	GGA	СТС	ATC	TTC	AGA	CGG	CAA
mRNA:												
AA Seq:												
Impact of this	s mutat	tion:										
Sample 3: Mutation Type:												
Odnipie 5. Wit	itation	Type						_				
DNA:	TAC	CAC	GTA	GAC	TGA	GGA	CTC	CTC	TTT	AGA	CGG	CAA
mRNA:												
AA Seq:												
Impact of this mutation:												
		_										
Sample 4: Mutation Type:												
DNA:	TAC	CAC	GTA	GAC	TGA	GGA	СТС	СТС	TTC	AGA	CGG	CAA
mRNA:												
AA Seq:												
Impact of this mutation:
